## SPECIFICATION

UNIVERSAL PUMP-COPRESSOR STATIONS Working media – hydrocarbons

Universal pump-compressor stations (UPCS) are designed for pumping (charging, evacuating, recovery) <a href="https://hydrocarbons.com/hydrocar

#### Main characteristics of producing UPCS for work with hydrocarbons:

- ♦ Pump type: piston, oil-free
- ♦ Type of compressor: piston, oil-free, single-stage
- ♦ Quantity of cylinders: two-cylinder / four-cylinder
- ♦ Discharge pressure range: 0 3.5 MPa (0-35 bar)
- ♦ Minimum inlet pressure: 0 bar
- ♦ Possibility of self-priming: yes
- Ability to work under excessive inlet pressure: yes
- ♦ Maximum inlet pressure: 1 MPa (10 bar)
- ♦ Drive type: electric, direct
- ♦ Ability to adjustment of the engine: Yes (depends on construction)
- ♦ Leak proof: Yes
- ♦ Power consumption: 1-3 kW
- ♦ Mains voltage required: 220/380V

## Main spheres of application of universal pump-compressor stations:

- Charging (pumping, loading, filling) the cylinders with hydrocarbons;
- Pumping (evacuating, recovery) cylinders with hydrocarbons till zero (the collection of the gas phase);
- Submission of hydrocarbons in other containers (dosing, packaging, filling, compression);
- Useful for chromatographic columns with hydrocarbons (for gas chromatography);
- Liquefaction of hydrocarbons by pressure;
- Pumping of liquid and gas phase of hydrocarbons from any vessels, ISO-tanks;
- Refueling (reloading, recharging) different systems with hydrocarbons.

### Main advantages of UPCS on oil-free compressor working with hydrocarbons:

- Pumping of pure raw materials;
- Evacuation of the gas (vapor) phase, which is considered as loss (non-pumped residue);
- ♦ Collection of residues without the use of inert gases (nitrogen, other exhaust gases);
- Variability of construction (individual characteristics and needs of the consumer);
- ♦ High quality materials and components.
